BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

Cidente: Liminate phosphory lase (EC 2.4.2.4)

CiSpecias: Homo sapiens (man)
CiSpecias: CiSpecias: Manual sapiens (manual sapiens)
Anticles: Identification of anglogenic activity and the cloning and expression of platele
Ancession: S03904: MID: 89181355; PMID: 2467210
Ancesion: S03904: MID: 89181355; PMID: 2467210
Ancesion: Loff Lists sequence, Including the amino end of the mature protein, was confine type: part of this sequence, Including the amino end of the mature protein, was confine and the salotens in the sapient of this sequence, Including the amino end of the mature protein, was confine type: mRNA
Ancession: Jud2: Assumption phosphorylase activity associated with platelet-derived endothelial of Ancession: Jud2: 24 2000

-!- FUNCTION: Specific ligand for the growth hormone secretagogue receptor type 1 (GHSR) inducing the release of growth hormone from the pituitary. Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.

-: FUNCTION: IGPS catalyzes the conversion of PRFAR and glutamine confident and glutamate. The hish subunit provides the glutamine amidotransferase activity that produces the ammonia necessary to hisf for the synthesis of IGP and AICAR (By similarity).
                                                                                                                                                                                                                                                                                                       16-OCT-2001 (Rel. 40, Created)

Natl. Acad. Sci. U.S.A. 99:4668-4673(2002).
-I- FUNCTION: Part of an ATP-driven transport system for a metal; this protein has affinity for Zn(II), Fe(III) and Cu(II).
-I- SUBCELLULAR LOCATION: Attached to the membrane by a lipid anchor.
                                                                                                                                                                                                                                                                                                                                   SIMILARITY: Belongs to the bacterial solute-binding protein family 9. Lipoprotein receptor antigen (Lral) subfamily.
                                                                                                                                                                                            Smoot J.C., Barbian K.D., Van Gompel J.J., Smoot L.M., Chaussee M.S., Sylva G.L., Sturdevant D.E., Ricklefs S.M., Porcella S.F., Parkins L.D., Beres S.B., Campbell D.S., Smith T.M., Zhang Q., Kapur V., Daly J.A., Veasy L.G., Musser J.M., "Genome sequence and comparative microarray analysis of serotype M18 group A Streptococcus strains associated with acute rheumatic fever

uncleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones. The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate ZSIG33 expression. The sequences of the invention and their complements are used as probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZSIG33 peptides are used as antigens of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZSIG33 and in assays to identify modulators of ZSIG33 expression and activity. The anti-ZSIG33 antibodies and antagonists are used to down regulate expression and activity. The anti-ZSIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG33 in amples (e.g. by enzyme linked immunosorbent assay (ELSA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or secretion of enzymes and/or hormones in the pancreas. ZSIG33-like peptide. Is used in protein therapy. The present sequence is human zsig33-like peptide. ZSIG33-linker peptide.
